## 🪪 PROFILE

Full-Stack Developer with 5+ years of experience, primarily focused on building high-performance, SEO-optimized frontend applications using Vue.js and Nuxt.js, with solid backend experience in Laravel.

## 🎓 EDUCATION

**Faculty of Commerce, Ain Shams University**                                     12/2018 – 08/2022

## 💼 EMPLOYMENT HISTORY:

**Aumet** ⧉                                                        09/2025 – Present | Hybrid
Full-stack web Developer
- Built responsive and scalable web applications using **Vue.js** and **Nuxt.js**, with a modular architecture and clean component structure.
- Developed and maintained a Sass-based design system, ensuring consistent UI styling and optimized frontend performance.
- Implemented dynamic data handling by integrating RESTful APIs with Vue.js for real-time UI updates and smooth user experience.
- Collaborated on backend development using **Laravel**, contributing to API endpoints, authentication, and business logic implementation.
- Worked closely with backend architecture and database structure to ensure efficient data flow between frontend and server.

**ID3M**                                                              01/2025 – 09/2025 | Remote
Full-stack web Developer
- Architected and developed full-stack applications using **Inertia.js**, seamlessly integrating **Vue.js** with **Laravel** in a server-driven SPA architecture.
- Eliminated the need for a separate API layer by implementing an Inertia-powered Laravel stack, simplifying data flow and improving development efficiency.
- Designed and implemented backend business logic, authentication flows, and role-based access control using Laravel.
- Managed shared props, form handling, validation lifecycle, and state synchronization between frontend and backend.
- Contributed to database design and query optimization to enhance overall system performance.

**Ministry Of Justice KSA** ⧉                                         02/2024 – 01/2025 | Hybrid
Sr. Frontend Developer:
- Developed and optimized internal systems in a law organization using **Vue.js and Nuxt.js**
- Built a **responsive**, **SEO-optimized** Single Page Application **(SPA)** using **Nuxt.js.**
- Integrated dynamic content via **RESTful APIs**, enabling real-time updates.
- Migrated legacy systems from **Vue 2** to **Vue 3.**

**Code95** ⧉                                                          02/2020 – 01/2024 | Remote
Mid Front-end Developer:
- Convert Figma Design to an Interactive Web Interface
- Developed internal systems using **Inertia.js and Vue.js.**
- Translated Figma designs to production-ready **Laravel Blade** interfaces.
- Built WordPress themes using **Roots-Bedrock**, reducing theme load.
- Created reusable custom WordPress **blocks** to support dynamic content.
- Registered dynamic fields with **Advanced Custom Fields** (**ACF**), enabling the creation of unlimited customizable pages with several content types.

## 🧠 SKILLS:

| HTML | PUG Js | Css | Sass | Git | Vuex | Pinia | Mysql | BootstrapVue | Vuetify |

| Tailwind | Shadcn | Bootstrap | Alpine.js | Radix Vue | Typescript | PHPNative |

## 📁 PROJECTS

**Aumet Pulse** ☐
Digital platform to Manage Pharmacies across Many Counries
*Vue, TypeScript, PHP, Laravel*

- Contributed to the development of a large-scale, multi-country pharmacy management platform supporting complex operational and financial workflows.
- Designed and implemented the **P2P** module, managing transaction lifecycles, validation logic, and financial state synchronization.
- Built reusable, scalable, and fully customizable UI components using Vue.js and TypeScript to ensure design consistency and maintainability across the system.
- Implemented advanced state management with Pinia to maintain predictable data flow and optimized frontend performance.
- Integrated digital wallets and online payment systems, handling transaction processing, confirmations, and edge-case scenarios.
- Developed complex financial calculation formulas and abstracted them into reusable composables to maintain system-wide consistency and reduce duplication.
- Collaborated on backend services using Laravel, contributing to business logic implementation, API structuring, and database optimization.
- Supported multi-country operations, including configurable financial rules and multi-currency logic.

**International Conference on Justice** ☐
Website For International Conference on Justice
*Vue.js, Nuxt.js, Vuex*
- Built the user interface with Nuxt and Vue.
- Integrate api's to feature dynamic content.
- Enhance SEO and Performance.

**Toyota Egypt** ☐
The Toyota EG is an interactive platform that showcases of Toyota models, including prices, specifications
*laravel, Inertia , vue , vuex*
- Built **UI** using **Laravel-Inertia** and **Vue.js.**
- Make reusable components as a block section to be used for inserting dynamic content in different pages.
- Implement instalment features and online booking for used or new cars.
- Implement **Google Maps** to set the location of the branches.

**Abdal** ☐
*Laravel , Blade, Vue 2, Ineria, Vue 3*
**Website:**
- Built the **website UI** using **Laravel-Blade** and **Vue.js.**
- Implement **Google Maps** to set the location of the branches.

**Abdal Business Platform:**
- Built the **UI** using **Laravel-Inertia** and **Vue.js.**
- Implement **Chart.js** for Reports, delivering, and monitoring.
- Create an **Editable table** for employees' payroll based on **dynamic equations.**

**Abdal Vendor Platform:**
- Built the **UI** using **Laravel-Inertia** and **Vue.js.**
- Create a Multi-Step Form for Employee Registration
- Integration with **online payment**
- Implementation of Online Contract Renewal

**Dar Auction** ☐
Dar Auction is a leading real estate, cars, land auction platform
*Nuxt, Vue 3, Typescript*
- Integrate Most Modules in the internal System of Dar Auctions using **Nuxt 3.**
- Integrate Authentications and secure Login (**OTP**) and **persist** data using **Pinia.**
- Create Reusable Components and customize ui in **Radix Vue**.

**Jish** ☐
JISH (Jeddah Institute for Speech and Hearing)
*PHP, WordPress, WooCommerce*
- Built using WordPress and WooCommerce.
- Create the **UI** using **Blade**, **SCSS, jQuery, and Bootstrap.**
- Slicing the Section to Create Reusable Blocks.
- Register Custom Fields for the Blocks and others using **ACF (Advanced Custom Fields)** Plugin.
- Create **WooCommerce** Store UI and customize the resources to fit the design.
- Implement auto-updated prices for multicurrency. (**USD**, **SAR**).
- Set Of **Custom delivery fees** Based On **distance** and **location.**
- Integration with Online Payment with (**PAYPAL**).
